

1. **Host** - The computer or device that is being accessed.  
2. **IP Address** - A unique numerical label assigned to each device connected to a network.  
3. **Port** - A specific point of communication on a device.  
4. **Protocol** - A set of rules governing the exchange of data between devices.  
5. **Service** - A specific application or function provided by a device.  
6. **Application** - A software program that runs on a device.  
7. **Device** - A physical hardware component that can connect to a network.  
8. **Network** - A group of devices connected together to share resources.  
9. **Router** - A device that directs traffic between different networks.  
10. **Switch** - A device that connects multiple devices within a local network.  
11. **Firewall** - A security system that monitors and controls incoming and outgoing network traffic.  
12. **Proxy** - A server that acts as an intermediary between a client and a destination.  
13. **Gateway** - A device that connects two different networks.  
14. **Bridge** - A device that connects two different network segments.  
15. **Hub** - A device that connects multiple devices within a local network.  
16. **Modem** - A device that converts digital data into analog signals for transmission over a telephone line.  
17. **Access Point** - A device that allows wireless devices to connect to a network.  
18. **Repeater** - A device that amplifies a signal to extend its range.  
19. **Antenna** - A device that transmits and receives radio waves.  
20. **Cable** - A physical medium for transmitting data between devices.  
21. **Wireless** - A method of transmitting data without the use of physical cables.  
22. **Bluetooth** - A short-range wireless communication technology.  
23. **Wi-Fi** - A wireless networking technology that uses radio waves to provide high-speed internet access.  
24. **Cellular** - A method of transmitting data using mobile phone networks.  
25. **Satellite** - A device in space that relays signals between a ground station and a user.  
26. **Cloud** - A network of servers that store and manage data.  
27. **Storage** - A device or system that stores data.  
28. **Backup** - A copy of data made for recovery in case of a disaster.  
29. **Recovery** - The process of restoring data after a disaster.  
30. **Disaster** - An event that causes significant damage to a system or organization.  
31. **Incident** - A security event that requires investigation and response.  
32. **Response** - The action taken to deal with a security incident.  
33. **Investigation** - The process of determining the cause and impact of a security incident.  
34. **Analysis** - The process of examining data to identify patterns and trends.  
35. **Reporting** - The process of documenting the results of an investigation or analysis.  
36. **Compliance** - The process of ensuring that an organization follows relevant laws and regulations.  
37. **Policy** - A set of rules that govern the behavior of an organization.  
38. **Procedure** - A set of steps that must be followed to complete a task.  
39. **Standard** - A set of guidelines that define the requirements for a system or process.  
40. **Best Practice** - A method or technique that is widely recognized as the most effective way to perform a task.  
41. **Framework** - A set of principles and guidelines that provide a structure for a system or process.  
42. **Model** - A representation of a system or process that is used to analyze and design it.  
43. **Simulation** - The process of imitating the operation of a system or process.  
44. **Experiment** - A test or trial that is conducted to determine the effect of a change.  
45. **Observation** - The process of watching and recording the behavior of a system or process.  
46. **Measurement** - The process of determining the size or amount of something.  
47. **Calculation** - The process of performing mathematical operations.  
48. **Analysis** - The process of examining data to identify patterns and trends.  
49. **Synthesis** - The process of combining different elements to create a new whole.  
50. **Design** - The process of creating a plan or blueprint for a system or process.  
51. **Development** - The process of creating a system or process.  
52. **Implementation** - The process of putting a system or process into operation.  
53. **Deployment** - The process of distributing a system or process to its intended users.  
54. **Support** - The process of providing assistance to users of a system or process.  
55. **Training** - The process of teaching users how to use a system or process.  
56. **Documentation** - The process of creating and maintaining records of a system or process.  
57. **Configuration** - The process of setting up a system or process.  
58. **Upgrade** - The process of improving a system or process.  
59. **Upgrade** - The process of improving a system or process.  
60. **Upgrade** - The process of improving a system or process.
